Profile

Computer Engineering student building full-stack and backend systems – REST APIs, role-based access control, and relational/NoSQL databases – across React/Node, Django/Flask, and Java, through coursework, hackathons, and self-directed projects. Project code and demos available via GitHub and portfolio (linked above).

Skills

- **Programming:** Java, Python, JavaScript, SQL
- **Web Development:** HTML, CSS, React.js, Node.js, Express.js, Django, Flask, REST APIs
- **Software Development:** OOP, DSA, DBMS, SDLC, Debugging, Testing, API Development
- **Frameworks/Libraries:** Django REST Framework, scikit-learn, Pandas, NumPy
- **Databases:** MySQL, PostgreSQL, MongoDB, SQLite, JDBC
- **Tools:** Git, GitHub

Education

B.Tech in Computer Engineering 2024 – 2028 (Expected)

LJ University, Ahmedabad

SPI Trend: 7.88 (Sem 1) → 7.92 (Sem 2) → 8.96 (Sem 3) → 9.56 (Sem 4)

12th Percentage: 84% – 10th Percentage: 65%

Projects

DealFlow360 – Self-Governing B2B Sales Operations Platform [GitHub Link](#)

Built the backend for a self-governing B2B sales platform automating the full deal lifecycle – quotation, discount approval, warehouse fulfillment, hybrid billing, and customer negotiation – using Node.js, Express, and React. Designed and implemented RESTful APIs and database logic to support multi-stage approval workflows, collaborating across a 4-person team (2 backend, 2 frontend) using a coordinated Git workflow to minimize merge conflicts.

WebWheels – Vehicle Marketplace Platform [GitHub Link](#)

Built a Flask-based vehicle marketplace with role-based access control, REST APIs, and transactional database operations for listings and purchases.

Integrated an AI-powered recommendation engine to surface relevant vehicle listings to users.

EasyGo – Transport Reservation System [GitHub Link](#)

Built a Java-based transport reservation system using OOP, JDBC, and SQLite, implementing backend functionality for seat allocation, schedule management, and transaction handling.

Designed custom data structures and database operations for seat availability, transport schedules, and reservation data.

AI Document Classification System [GitHub Link](#)

Built an NLP-based document classification system combining machine learning models with similarity-based semantic search for document retrieval.

LocaVista [GitHub Link](#)

Built a geospatial analysis platform (React frontend, Python backend) processing and rendering spatial data across Ahmedabad city as interactive maps.

Designed the data pipeline connecting backend spatial processing to frontend map visualization, enabling real-time exploration of location-based data.

Achievements

- **LeetCode:** Solved 100+ DSA problems (30 Easy, 60 Medium, 10 Hard) and earned the **50-Day Coding Badge** [GitHub](#)

Certifications

- **Exploratory Data Analysis for Machine Learning** [Credential](#)
- **Hackathon Participant – TIC Tech Toe '2026 (DA-IICT)** [Credential](#)
- **Hackathon Participation – AI Project** [Credential](#)
- **Inheritance and Data Structures in Java** [Credential](#)
